

STATEMENT OF WORK

THIS STATEMENT OF WORK made this 20th day of July 2026

Between

HOME IHC SDN. BHD. (Reg No. 201801030396/1292422-M) a company incorporated in Malaysia under the Companies Act 2016 and having its usual place of business at F-75 Tingkat Atas, Jalan Tengku Ismail, 28000 Temerloh, Pahang (hereinafter referred to as "Client") of the first part;

And

NICHOLAS TAN SHENG MIN (NRIC No. 011105-10-1179), a Malaysian citizen of full age (hereinafter referred to as "Developer") of the other part.

(hereinafter collectively referred to as the "Parties" and individually referred to as a "Party").

1) Project Overview

This Statement of Work ("SOW") defines the technical scope, deliverables, and commercial terms for the development and deployment of a fully automated, AI-assisted lead management ecosystem for Home IHC Sdn Bhd.

By utilizing a custom-coded architecture running on a dedicated Standard AI PC, this solution ensures maximum performance, localized privacy, and total ownership of the IP by the Client.

2) Technical Architecture & Infrastructure

- a. **Core Engine:** Custom codebase replacing legacy n8n workflows, ensuring highly optimized API routing and data handling.
- b. **Hardware Profile:** Standard AI PC equipped with an NVIDIA RTX 5070 Ti GPU for high-speed, localized AI inference.
- c. **Data Governance:** Locally Hosted PostgreSQL database for strict PII isolation. No sensitive chat logs will be stored in public cloud spreadsheets.
- d. **File Management:** pCloud integration for secure asset storage and automated PDF document dispatch (e.g. Property Acknowledgement Letters).

3) Phased Workflow Deliverables

3.1 Phase 1: Lead Inflow & AI Filtering

- a. Integration with Meta WhatsApp Cloud API.
- b. Implementation of Two-Number Routing Logic (AI Sub-number for frontline handling, bridging to Main Number for high-touch conversion).
- c. Custom AI Prompt Engineering to accurately classify incoming leads (Buyer, Seller, Agent, Valuer, Tenant, etc.).

3.2 Phase 2: Before Viewing (Pre-Nurturing)

- a. Calendar synchronization for viewing appointments.
- b. Automated Intent Tagging (Hot, Warm, Cooling) driving dynamic follow-up frequencies based on buyer engagement.

3.3 Phase 3: After Viewing (Automated Dispatch & Follow-up)

- a. Programmatic generation and dispatch of the Customer Property Acknowledgement Letter (PDF).
- b. Execution of the Accelerated Follow-up Matrix (Hot: 24-72h, Warm: 3-7d, Cooling: periodic).

3.4 Phase 4: Retention & CRM Handoff

- a. Closed-won status updates and automated transition of the lead into the primary PostgreSQL database for lifecycle management.

3.5 Phase 5: Weekly Report

- a. Report of lead inquiries and status for the week.

4) Scope of Work Boundaries

4.1 Initial Implementation Scope: The scope of work is strictly bounded to the initial AI implementation detailed in the project proposal and outlined in Sections 2 and 3 above.

4.2 Additions & Modifications: Any additions, new features, or structural workflow changes beyond this initial implementation scope will be classified as part of the Service Level Agreement (SLA) and managed under the Annual Support SLA, or billed independently.

4.3 User Acceptance Testing (UAT) & Revisions:

- a. **UAT Window:** Upon deployment of the initial implementation, the Client will have a fourteen (14) day UAT window to test the system in a live or staging environment.
- b. **Capped Revisions:** Due to the iterative nature of AI, the initial implementation fee includes exactly three (3) consolidated rounds of revision (e.g., prompt tuning, minor workflow adjustments) during this UAT window.
- c. **Completion Benchmark:** The project is deemed successfully completed when the core workflows outlined in Section 3 execute successfully. Any subjective dissatisfaction regarding AI tone or structural workflow changes requested after the two revision rounds will be classified as Scope Additions and deducted from the Annual Support SLA.

5) Commercials & Payment Schedule

The total investment for the software implementation and ongoing support is as follows:

Item	Description	Cost (MYR)
AI Implementation	One-time setup, custom coding, prompt engineering, and deployment of the ecosystem.	RM 8,000
Annual Support SLA	12 months of dedicated system maintenance, bug fixes, prompt tuning, and stability monitoring.	RM 4,000
TOTAL		RM 12,000

Note: The costs above cover professional services. Hardware procurement (RTX 5070 PC) and third-party API consumption fees (Meta, OpenAI/Local AI compute overhead, pCloud) are billed

separately or paid directly by the Client.

5.1 SLA Terms & Conditions:

- a. **SLA Commencement:** The 12-month Annual Support SLA timer will officially commence upon the successful handover and client acceptance of the initial AI implementation.
- b. **Resource Allocation:** The Annual Support SLA includes a maximum allocation of 40 hours over the 12-month period for system maintenance, bug fixes, prompt tuning, and any out-of-scope additions/modifications. Any additional hours required beyond this cap will be billed separately at standard hourly rates.

6) Assumptions, Dependencies & Liabilities

6.1 Third-Party APIs & Infrastructure: The functionality of this ecosystem relies on continuous access to third-party services (Meta WhatsApp Cloud API, pCloud). The Developer is not liable for system downtime, API deprecations, rate limits, or WhatsApp account suspensions (e.g., due to spam reports) initiated by these third parties. Any code refactoring required to adapt to unannounced third-party API changes will be serviced under the SLA.

6.2 Hardware & Local Network Uptime: As the system is deliberately hosted locally on a Standard AI PC to ensure privacy, the Developer is not responsible for downtime caused by physical hardware failure, local internet outages, or power disruptions at the Client's premises.

6.3 Data Compliance & Indemnification: The Client is solely responsible for obtaining legal consent to contact leads via WhatsApp and complying with all relevant data privacy laws (e.g., PDPA). The Developer provides the technical infrastructure but is strictly indemnified against any legal action, fines, or damages arising from the Client's communication practices or data usage.

7) Intellectual Property & Ownership

Upon full and final payment of the AI Implementation fee (RM 8,000), Home IHC Sdn Bhd shall possess and retain full intellectual property ownership of all custom source code, AI prompts, and integration logic developed specifically for this project.

[The remainder of this page is intentionally left blank and execution page follows]

IN WITNESS WHEREOF the Parties have hereunto set their respective hands on the day and year first before written.
